VARY

NEW 2008: Grass mower of variable width, suited to work on vineyards and orchards. Built with robust chassis, compact design and low and smooth profile, it guarantees affordability and efficiency. The variable width is operated by two hydraulic cylinders which open and close the two lateral disks. Both the cylinders are equipped with anti-shock valves. The transmission by means of three gearboxes and high resistant V-belts, which drive the articulated blades in counter-rotation, provide a perfect cut with any grass' condition. It is possible to select the desired height of cut and to adapt the machine to different conditions of the terrain, by adjusting the position of the rear roller and of the front wheels. On request, the machine can be driven in front of the tractor and also equipped with a herbicide kit. It is possible to equip the machine with an independent hydraulic system, which permit to the lateral discs to swing automatically in and out from the between-row of plants. This system is required specially by modern biological farms.

FLEXY

NEW 2008: Grass mower with variable working width, suited to work on vineyards and orchards. Built with robust chassis, compact design and low and smooth profile, it guarantees affordability and efficiency. The working width of the whole machine can be hydraulically adjusted by means of two bars of steel that shift on hardened and self-lubricating bushes. This efficient and user-friendly system, permits to the machine to adapt itself to the different width of the rows in the cultivated area. The transmission by means of three gearboxes which drive the articulated blades in counter-rotation, provide a perfect cut with any grass' condition. It is possible to select the desired height of cut and to adapt the machine to different conditions of the terrain, by adjusting the position of the rear roller and of the front wheels. On request, the machine can be driven in front of the tractor and also equipped with a herbicide kit.

FRUTTI

NEW 2008: Displaceable grass mower equipped with extremely low profile chassis and off-set construction, that permit to the machine to reach and cut even the most hidden grass under the low branches, without damaging the fruits and next to the plant's trunk. The transmission is by means of a gearbox and high resistant V-belts, which drive the counter-rotation of the blades, to obtain a perfect cut with any grass' condition. It is possible to select the desired height of cut and to adapt the machine to different conditions of the terrain, by adjusting the position of the rear roller and of the front wheels. On request, the machine can be driven in front of the tractor and also equipped with a herbicide kit.

WING

Heavy-Duty multipurpose mulcher, **suited for professional operators**, to fit tractors from 90 to 150 HP. The machine can mulch grass, brush, heavy vegetation and branches up to 6-7 cm Ø, on tough applications such as road-side, slopes, ditches, watercourses, open field, etc.

[top ▲](#)

MULTY

Heavy-duty high body mulcher for orchards, pineapples, set-aside, cereals and open field cultivations in general. Suited to mulch grass, bushes, stalks and wooden pruning (up to Ø 8 cm) For tractors from 70 to 130 HP.

[top ▲](#)

PICKER/F

Special mulcher with "pick-up" rotor suited for mulching wooden material such as pruning and branches (up to Ø 8 cm.), ideal for vineyards and orchards with uneven and stony terrains. For tractors from 60 to 120 HP.
