

3P1006NT Model Shown With Optional Native Grass and Small Grass Boxes

## 10ft Narrow Semi-Mounted

The 3P1006NT model is the big brother to the 8' - 3P806NT. At 10' seeding and 10' transport this machine is productive yet can easily get in pasture gates, over bridges and transport down narrow roads. 2-point mounting and dual hydraulic lift assist wheels in the rear give the machine excellent ground clearance as well. Rigid coulters allow the 3P1006NT to stay on side hills without drifting. Competitive models use pivoting coulters that tend to run downhill. 2 smaller pneumatic tires in front gauge depth for the coulters, as well as, drive the metering systems on the machine.

With the main seed box only the machine weighs 4350 lbs. so it has the weight needed to penetrate tough no-till surfaces. If even more weight is needed an optional weight bracket can be installed to get excellent penetration in the toughest ground.

FEATURES & BENEFITS

**MULTIPLE BOX COMBINATIONS** - Start with the standard 2 bu. per ft. main seed box, then add either a 2nd seed box for dual seed, a dry fertilizer box, or a native grass box. Additionally you can add a small seeds box to the main box or add it to the dual seed/fertilizer/native grass box choice.

**LIFT ASSIST** - 2 lift assist wheels in the rear of the 3P806NT & 3P1006NT models provide greater lift capacity and assist the 2-point. Castered heavy duty skid steer tires and straddle axles allow high flotation, maneuverability and strength.

**2-POINT MOUNTED** - Allows the drill to work independently of the tractor on hills and valleys.
