

PATU IIII

DC 65

WOODCHIPPER

PATU

DC 65 WOODCHIPPER

Patu DC 65 is a 3-point hitch mounted disc chipper for tractors 20 - 45 hp. With its four knives it will efficiently chip limbs, slabs or whole trees. The maximum infeed diameter is 6 1/2 inches (170 mm). The feed chute is on the right hand side of the chipper, which enables the operator to work away from the road traffic.

Unlike most of its competitors the DC 65 features an adjustable chip length. This enables the production of different chip sizes for different purposes. The discharge chute rotates 360°. Thus the chips can always be blown to the desired direction.

The DC 65 HF has a hydraulic power feed. This ensures an efficient feed of limby materials and a uniform chip size. Christmas tree removal, brush clearing and limb removal in orchards are some of the many applications. The feeding speed can be adjusted with a flow control valve.

The Patu DC 65 MF has a powerful manual feed. The knives pull in most of the material with no pushing by the operator. A slab even 9" (225 mm) wide can be fed into the DC 65 MF.

The feed chute can be folded up and latched. This makes road transport easy.

TECHNICAL SPECIFICATIONS		PATU DC 65	
MODEL	DC 65 MF	DC 65 HF	
Infeed	Manual	Hydraulic power feed, connected to tractor hydraulics	
Max. feed diameter	6 1/2" (170 mm)		
Knife setting	1/4" - 3/4" (6 - 18 mm)		
Chipping disc	— diameter		
	— weight		
Number of knives	4		
Discharge	— height		
	— rotation		
Power requirement	20 - 45 hp (15 - 33 kW) 540 - 1000 rpm		
Mounting	3-point hitch Cat. I and II		
Weight	650 lbs (295 kg)	825 lbs (375 kg)
