Analex 633 with 6.3 m working width

Turning on headland

The mainframe can be hydraulically lowered for transport

Vicon Analex 633-703/763

Cost effective centre swath rakes

With a working width of 6.3, 7.0 or 7.6 m the compact range of Vicon centre swath rakes offers a variety of working widths, suitable for all kinds of mowing widths. The rakes are fitted with maintenance friendly rotor head and have 11 cranked tine arms on each rotor.

Adjustable working width

The working width of Analex 763 is hydraulic adjustable from the tractor cab and can be set between 7.0 - 7.6 m. A very flexible solution that makes it possible to adapt the swath to the following pick up size/capacity.

Manoeuvrability

The active steering device on the main frame and the 90° pivoting headstock ensure excellent manoeuvrability. The centre swath rakes are converted for transport hydraulically. Transport height is below 3 m.

Transport position

The Analex centre swath rakes are converted hydraulically for transport position from the tractor cab. There is no need to remove the tine arms, transport height will still be below 4.0 m. The transport height of the Analex 763 can be further limited by hydraulically lowering the carrier frame.
